

## PB-FL-300WB2

- Port-Bright™ **LUMENEC**® tuned spectrum
- Color Rendition Index (CRI) > 90
- 100,000 hour life cycle
- 110V ~ 277V auto-sensing ballast
- Instant strike/re-strike
- Full diffusion nano-reflector technology
- **VARI-BEAM**™ focus technology
- Powder-coated all-weather aluminum
- IP65 rated WF2 anti-corrosion grade
- 150mph wind resistance

The Port-Bright™ 300-Watt round floodlight is ideal for all areas with close proximity to aquatic eco-systems and environmentally sensitive settings. The unique Turtle-Safe™ spectrum with large format light source (bulb) is capable of replacing 1000W high pressure sodium and metal halide fixtures for energy savings of up to 70%. Unique Vari-Beam™ technology allows changing the focal length to provide precision cut-off and minimal light pollution. Mercury is a solid encapsulated amalgam, making Port-Bright™ environmentally friendly and safe. No special handling is required. No hazardous material disposal is necessary.

Port-Bright™ lights emphasize the visual acuity of the human eye without unnecessary glare to provide stunning resolution with very low energy consumption. Instant strike means never having to wait for a warm-up or cool-down. The PB-FL-300WB2 will not disturb nocturnal wildlife such as owls, bats, canines, and deer. The light is specifically designed to have minimal impact upon turtles. Equally important, it is a neighbor-friendly fixture that can be focused away from surrounding buildings and homes. Port-Bright™ lights are not affected by temperature.
